

# Tangguh CCUS

National Strategic Project  
The most advanced CCUS project in country

- Decarbonizing Tangguh  
*Inject and store CO<sub>2</sub> at initial stage*
- Increasing production  
*Enhanced gas recovery*
- Decarbonizing beyond Tangguh  
*CCS hub opportunity ca. 1.8 GtCO<sub>2</sub> storage capacity. Enabling low carbon projects*

#### Onshore facilities:

- AGRU (Acid Gas Removal Unit)
- Dehydrator
- CO<sub>2</sub> Compressor

Injector Platform

Production Platform

CO<sub>2</sub>

Vorwata Reservoir

Natural Gas

Helping Indonesia's energy transition

Creating social and economic impact

Making Tangguh one of the world's lowest carbon intensity LNG plants in the world

Feasibility studies completed with overseas emitters (Chubu Electric) and domestic emitters including blue ammonia (Pertamina) and electricity (PLN, Jawa 1 Power)
